Linux App Summit 2022

Friday 29 April 2022 - Saturday 30 April 2022

Remote

Track Overview
Gaming

With the contributions from Valve (Steam and Proton), and with community gaming initiatives such as Lutris/Wine, gaming on Linux is continuing to gain momentum.

What direction does the free desktop need to take to ensure gaming on Linux is a success? What project are happening to push gaming on Linux forward?

Ecosystem Growth

The growth of Linux-based hardware offers more choices in the market and indicates further investment into the Linux app space. App Stores are offering thousands of applications and games for the Linux platform and open source is growing necessity in tech.

How can we ensure continued growth for the Linux app ecosystem? Are there areas of opportunity we should explore? How can we build sustainability into our ecosystem? How do you keep your users engaged?

Platform Diversity

The Linux platform’s greatest strength is the wealth of diversity in our ecosystem. There are toolkits and software languages for every purpose. Whether you want to develop a game, design an application, or even build a website, the app ecosystem has the tools to make that happen.

Are you working on a technology that enables cross-platform distribution? Do you have ideas for how we can enable platform diversity? How should we evolve to reach your users?

Innovation

Important technologies that you use on a daily basis (maybe without realizing it), have been developed within the Linux app ecosystem. Discuss with us how to push the boundaries of what we are offering right now and reach more users than ever before.

What does the Linux app ecosystem need to get to the top? What are we missing? Are there new technologies we should be embracing?

People and Communications

While the Linux app ecosystem has been largely shaped by open source communities, we believe there’s space for everyone. Making sure both businesses and communities alike can thrive in the ecosystem is vital for the platform to be sustainable over time. It is vital that people are able to make a living from the work they do for Linux users.

How can we make sure companies find their niche in the ecosystem? How can we help communities work together to create and support end-user apps? How can we keep people around in the long-run?
